

Samba MKII

This is our first single chassis turntable which uses an integrated motor and smallAlpha power supply. Since the 2007 model a new 6,0 Kg 34 mm thick platter runs on our unique maintenance free Tidorfolon bearing, ensuring incredibly low noise and years of consistent, maintenance free operation, whilst the overall turntable is adjustable on three feet. This turntable ships with our AS250 tonearm and our VTA collar, permitting easy and precise setup to maximise the sound from this outstanding turntable. The small version of our regenerative Alpha Power is included. You can choose between Acoustic-Signature tonearms AS 250 or AS 300 or get a armboard for any other tonearm. What the press says: Not only the mechanical engineering is impressive, also the smallAlpha power supply is unique in this price class. Wow//Flutter value

was one of the best we ever measured. Who ever searches for a top built and highly musical turntable and is not listening to the Samba will be punished by the god of music with doubts about the maybe wrong decision.

Stereoplay: PerfectAlpha Power supply, he is a bargain. Perfect produced turntable with a lot of drive and Rhythm, the new mark in this price class. Outstanding performance, HIGHLIGHT.

Technical Data

Drive System	1 Synchronmotor
Bearing	High Precision Tidorfolon Small Bearing
Chassis	25 mm Alu Chassis with 3 adjustable feets
